# EnviroBubble

**The Introduction of the new EnviroBubble is set to revolutionise the way we use and dispose of plastic products**

**The TDPA additive will be combined with the Sancell Void-Fill product strengthening its reputation as one of the most cost effective and versatile products in the market.**

□ TDPA – (Totally degradable plastic additives) are blended into the resins during production.

□ Mechanisms that trigger this process of oxidative degradation are heat input and sunlight (UV light)

□ For products in the presence of moisture, microorganisms, oxygen and soil these products will ultimately biodegrade.
